

PEEK-A-DRAWER

itiro siio, james rowan and elizabeth mynatt

Grandparents want to share a part of their living space with their grandchildren who live far away.

This provides virtual shared drawers across distant locations.

When a user puts something in the upper drawer and closes it, a photograph is taken automatically, and the image appears in the lower drawer at a distant place.

Past pictures can be accessed by pressing buttons on the lower drawer.

The operation is so simple -using a drawer- that even children can communicate with their grandparents. As the camera only takes objects inside the drawer, privacy is assured.
